disagreed on every
component written here

Recommendation:

Pinto should use authoritative leadership style and start mitigating the seniors' conflicts eagerly

- [F, p.1]: Choosing a specific support structure allows the mechanical design to be finalized
- [A]: Bennett agrees to try making the honeycomb lighter
- [A]: Completes the prototype and document as the platform option
- [A]: Fast intervention allows for the arguments to not escalate

Why? - **Nothing Moves Until Someone Closes the Decision**

- [F, p.1] Mechanical design cannot finish without the structure.
- [F, p.2] Pinto believes the team cannot afford either of them not working.
- [A] They didn't have predecided rules on criteria for accepting ideas.
- [A] Bennett's strength is the missing piece, not a threat

Why? - **Pinto defaults to affiliative leadership when authority is needed**

- [F, p.7] Resolves conflict through open discussion, not directive calls
- [F, p.7-8] Ran the design choice as a team debate, not his call
- [F, p.2] Already decided, yet still "struggling" how to tell them
- [A] Affiliative style favors harmony over decisive direction

Why? - A leadership call protects Bennett, A team call isolate him

- [F, Exhibit 3] Satera rates below other RID teams on work-group support
- [F, p.4] Team never built trust to handle its own diversity — Rowling
- [F, p.4] Early team-building effort was made but largely ignored
- [A] Affiliative gestures without direction do not build real trust

Why? - **Continuous intervention allows the situation to stabilize**

- [F, p.4] Steve recognized that team-building was only done at the beginning of the project
- [F, p.7] Pinto is used to resolving conflict through open discussion, not directive calls
- [A] Constant intervention by Pinto would allow the bickering to not get too heated.

30 days: decide directly, assign, check in

- Day 1 — Pinto direct instruct the team on his decision in a short meeting.
- Week 1—set 3 rules: idea time, stated reasons, escalation
- End of Week 1—full-team meeting states decision, credits both
- Ongoing—short check-ins to catch any new brewing conflict and resolve it
- Success = design resumes, weight target met, no new blockers

Potential risks

Biggest risk: Bennett will not accept a supporting role [A]

Fallback: 1-on-1 coaching with Bennett [L1a s28]

Honeycomb shows no progress in reducing weight by week 2 [A]

Fallback: Switch to working on Bennett's prototype

Pinto is unable to act decisively for a prolonged period of time [A]

Fallback: Tiger team takes charge of delivering decisions, Pinto stays as advisor and trusted figure
